Dear Hiring Manager,

I am writing to express my interest in the Software Developer / Software Engineer position. With a strong foundation in full-stack development, test automation, and Agile team collaboration, I bring both technical skill and real-world experience delivering production-ready features in high-velocity environments.

Currently, I work at William Hill as a Software Quality Engineer while also pursuing a Level 4 Software Developer Apprenticeship. In this role, I've contributed to several high-impact projects—including Bet Builder, Acca Winnings Boost, and Base Pricing—that have directly influenced business growth and system performance. My work spans both frontend (React, Redux) and backend (Java, Spring Boot) development, as well as building robust test automation using tools like TestCafe, Cypress, JUnit, and Mockito.

I am particularly passionate about clean code practices, continuous learning, and delivering user-centric solutions. I thrive in cross-functional Agile teams, where I actively participate in sprint ceremonies, peer reviews, and shared ownership of deliverables. Whether debugging complex issues, contributing to UI/UX consistency, or refining CI/CD pipelines, I approach each challenge with curiosity and drive.

I am now eager to take the next step in my development journey by joining a team where I can make a meaningful impact while continuing to grow as a well-rounded software engineer. I'm confident that my blend of hands-on experience, collaborative mindset, and technical foundation makes me a strong fit for this opportunity.

Thank you for considering my application. I would welcome the opportunity to discuss how I can contribute to your team and projects. Please find my CV attached for further details.

Yours sincerely,

Sarath Ramachandran
